

Company Profile

Handle Quality

Listening. Understanding. Promptness.

GAMM is a valuable partner in many sectors. Everything is based on the value of people: listening skills, networking, helping customers and suppliers find the right solution as promptly as possible. **This is constantly enriching** everyone's experience, from a technical but above all human point of view.

From the

origins to today

Our goal
is not about selling products.
It is about building trust.

1958

Maserati 3500 GT
(Type 101), 1958

Group Agosti Montecchio Maggiore

Our history is similar to that of many companies born in the period of the Italian economic miracle. **We started in 1958 with a simple hand press**, printing small bakelite articles for large enterprises in the territory.

In short, the company expands, with the purchase of new machinery for the molding of thermoplastic material and the development of a first catalog, **but it was only in the early 80s that the transition from contractor to producer came to light.**

Since then, we have grown, technologies have changed, people have changed, but our goal is always the same: **produce excellent products for the manufacturing industry.**

For 60 years, alongside the manufacturing industry

Every enterprise is conceived with a goal. We have always **figured out the needs of the manufacturer** and provided immediate and quality solutions.

If you are looking for a product such as a thermoplastic handle or handwheel, you will find an **almost bottomless choice of**

different items in terms of design, material, technical features and price. Whatever the item, our job is to make, **the most functional and solid product, not ignoring the esthetics**, offering our customers a wide range and a prompt delivery.

Why

Gamm

What makes
the difference is not
what you do, **but how.**

The best solution, right when and where you most need it

Large industries need valuable partners, able to anticipate requests and solve problems with reliable, timely and efficient responses.

To succeed in this challenge it **is necessary to be forefront with the companies**, to know in depth the various sectors and to face directly with the entrepreneurs, to turn their needs into practical solutions.

Because **the best ideas always come from dialog, sharing and cooperation.**

The best reference between man and machine

What do they have in common **a hammer, an oven and a tractor?** These are very different objects, but in reality they are all tools that involve the use of hands.

The hammer has a **handle**, the oven door and the tractor door both also have a **handle**.

These are small but vital components,

because **without them the instrument itself would be useless.**

It is our responsibility to make them in the best possible way, because **it is on these details that we play the success of the final product** and the reputation of our customers.

Partner

Where we

stand

The success of a company is based on the **solidity** of its beliefs.

A black and white photograph showing a close-up of a hand holding a pen, poised to write on a document. The word "People" is written in a white, elegant script font across the center of the image. A thin red horizontal line is positioned just below the text. The background is dark and out of focus, emphasizing the hand and the pen.

People

People

Listening. Sharing. Collaboration.

If we are an excellent partner for the industry in Italy and all over the world, we owe it to the **value of those who work with us.**

Our **made in Italy invests in both technical and human skills**, because a company is not only made of numbers, performance and turnover. It is made of people above all.

Those people that **design, produce, manage, care for safety, quality and support the customer** thanks to our efficient and capillary network of agents.

What matters is to team up, in and out of the company, as in a large family that brings together all the players in the production chain, so to hear everyone out, share ideas and turn them together into effective and innovative solutions.

Product

Solidity. Esthetic.

Functionality.

There are so many ways to make the same product, but there's only one proper way. It means buying the best materials from trusted suppliers, because **good foundations are key to the best outcome.**

It means giving priority to **small-batch production**, because quantity without quality is of no use to anyone.

It means **producing in Italy**, using the most advanced technologies and highly specialized personnel.

It means **to be never satisfied, always on the lookout for the best** to optimize every aspect, from the production cycles to the smallest finish.

Product

Service

Service Availability. Advising. Promptness.

Having a rich catalog is important. But more than that, being able **to meet the customer's needs** as quickly as possible is of utmost importance.

That is why we have **4 automated warehouses** with storage capacity of **over 500 thousand pieces**, so we can guarantee immediate supplies even on large quantities.

From the order placement to delivery, it only takes few hours and thanks to our **network of distributors**, we can reach more than **60 countries** in no time.

However, this is just the final part of a process that begins much earlier, **with consulting, on-going support, and seeking the best answer.**

For the future of

the environment

Those who want
to grow must have the
courage to change.

The ability to innovate is only the beginning.

Innovation is a constant process, it never stops, and to be competitive in terms of quality and efficiency, you must invest continuously in state-of-the-art machinery and systems.

The technology is used to speed up and automate processes, **delivering increased performance and enhanced security**.

For this reason we have been applying the instruments of **Industry 4.0** to production and logistics for years, so that everything is always under control, from complete cycles to single machine.

To **make a man's work even better**, without ever replacing the human factor.

Innovate

Sustainability

For a good business, you need consciousness.

We work bakelite, thermoplastic materials and metal and we do it in a conscious way, **committing ourselves to produce more and more green.**

All our machines have **hybrid and electrical technologies** that significantly reduce energy consumption.

The working places are environment-friendliness designed, **with low absorption lighting, green economy heating and photovoltaic systems.**

Because for us **sustainability** is a **commitment** that is renewed every day and that concerns every aspect of life and work.

The numbers,

the products

The quality seen
through **the numbers.**
